# Locating EPIC on the hard-drive

When the editor is first installed, it has no way of knowing where the EPIC programmer is located on the hard drive. Therefore you must inform it as to it's whereabouts using the **EPIC PATH** menu option, located in the **OPTIONS** menu. You will be greeted with a window as shown below.

The location of the EPIC programmer in the above window is C:\EPIC, and the executable filename is EPICWIN.EXE.
